BOOT CAMP - Two View Controllers

1- Create project
        single view

2- Create file Objective C Class with XIB
        SecondViewController

3- Edit ViewController.h
        create IBAction
        - (IBAction) showInfo:(id) sender;
        #import "SecondViewController.h"

4—Edit ViewController.m
        — (IBAction)showInfo:(id)sender
      {
        SecondViewController *controller = [[SecondViewController alloc]
              initWithNibName:@"SecondViewController" bundle:nil];
         [self presentViewController:controller animated:YES
                   completion:nil];

// if you want animation before presentViewController
          controller.modalTransitionStyle =
                  UIModalTransitionStyleFlipHorizontal;
      }

5— Edit ViewController.xib
      create button or toolbar
      link button to IBAction showInfo

5— Edit SecondViewController.xib so it can be identified

——————————

Return from second view

6 Edit SecondViewController.h
        create IBAction
        - (IBAction)goBack:(id)sender;

7— Edit SecondViewController.m

— (IBAction)goBack:(id)sender
    {
      ViewController *controller = [[ViewController alloc]
            initWithNibName:@"ViewController" bundle:nil];
      controller.modalTransitionStyle =
            UIModalTransitionStyleFlipHorizontal;
      [self presentViewController:controller animated:YES completion:nil];
}

————PRACTICE

Create a third view Controller
